

Company Overview

Realworld Systems is a global geo-spatial solution provider for the utility and tele-communication industry, transport companies and the public sector.

Realworld Systems offers consultancy, integration and training services, product development, complemented with an extensive product range and knowledge of your business processes. Realworld specializes in integrated spatial solutions for companies involved in creating and maintaining complex distribution networks as well as integration of spatial information in your business process for design, planning, build and maintenance.

Geo-spatial IT consultants: Realworld's intellectual assets

Founded in 1994, Realworld has been at the forefront of ICT technology for many years. Spatial systems, service oriented technology and Internet are the technologies on which the Realworld knowledge is based. The Realworld consultants bringing this knowledge into your organizations are the core assets of Realworld worldwide.

Realworld Systems specializes in the implementation and maintenance of IT systems for spatial information management (GIS) and integration with systems for resource planning (ERP), monitoring (Scada), logistics and operational support. Realworld provides network asset design and management solutions based on industry leading platforms.

Your problem addressed

The pressure to achieve workflow efficiencies is continuously increasing. Practices based around isolated IT islands of knowledge are not sustainable in today's networked world. The times where the processes of design, build and maintenance of assets are seen as independent tasks are over.

Building the right integrated business solutions to reach the goals set, may seem easier said than done. Realworld Systems addresses operational and business issues from a practical perspective: what kind of system will provide a complete, cost-effective solution relevant to the real world the customer operates in? Realworld Systems looks for rapid ROI while ensuring that ongoing costs of system support and development are as low as possible.

Solutions open to the future

The solutions that Realworld offers are based on extensive knowledge of industry standard products, like Oracle, Oracle Spatial, Smallworld, ESRI and common programming and integration standards. By adhering to open standards and open systems the solutions that Realworld offers are fit for usage and growth into the future.

The Business Case of Spatial Information

Investments in spatially enabled systems offer rapid payback by reducing costs and potentially increasing revenues. At its most basic the proposition is:

- improvement of information quality through spatial presentation and analysis;
- insight in the location of your assets, customers and employees;
- integration of the field force into your automated asset management procedures;
- increased productivity per day per field operator;
- provision of information electronically to service teams, customers and external partners;
- automation of workflow by locating staff and requests;
- streamlining the process flow to focus on delivery to the customer;
- improvement of access to operational and business information to support decision making.

Extending your business systems with spatial information will offer your staff tools to optimize their work processes.

Integrating spatial information into your ERP, WFM, Field Force, Design and Maintenance systems opens up a wide menu of possibilities.
